Simple Invoice Manager (SIM) — Knowledge Base

> ***Purpose:*** *This is a pure reference knowledge base for the Simple Invoice Manager app. It contains feature descriptions, field definitions, business concepts, alternate terminology, and contextual background. Step-by-step instructions are handled separately in the prompt layer.*

Table of Contents

1. Company / Business Setup
2. Clients & Suppliers
3. Products & Services
4. Invoices
5. Estimates / Proforma Invoices
6. Sale Orders
7. Purchase Orders
8. Purchase Records
9. Inventory Management
10. Sale Returns, Refunds & Credit Notes
11. Sub Users & Approvals
12. GST Compliance — India

---

1. Company / Business Setup

What It Is

A feature that lets you set up and manage your business details either during first-time onboarding or later from the app settings (Primary Settings, Invoice Header & Footer).

When & Who

Filled by the business owner during initial app setup (onboarding) and updated anytime later from settings whenever business information changes.

□ A. Flow for Onboarding:

1. Install the App you can see Onboarding Screen.
2. Upload your **company logo** and **owner signature** (can be added manually).
3. Fill in the required business details (see Field Reference below).
4. Set your preferences (country, currency, financial year, date format).
5. Tap **Save / Update**. Wait a moment for the database to update.
6. Note:- [If you want access this information inside the app]
    1. Go to Settings >> Primary Setting (Transaction No., Tax Identification Type, Country, Financial Year, Currency Format, Bumber Format, Date Format)
    2. Go to Settings >> Invoice Header/Footer (Logo, Company Name, Address, Phone Number, Email Address, Website, Head Note/Foot Note, Signature and Paid Stamp)

Key Fields

Field	What It Means
Business / Company Name	The legal or trade name of the business. Printed on all documents.
Country	Sets regional defaults — currency symbol, tax label, date format.
Currency Format	How monetary amounts are displayed (e.g., ₹1,000.00 or $1,000.00).

Field	What It Means
Financial Year Range	A Financial Year (Fiscal Year) is a 12-month accounting period used for bookkeeping and tax reporting, which may differ from the calendar year. The app uses this period to filter dashboard data and reports
Tax Identification Type	Simply means the kind of tax ID format being used based on a country's system.
Date Format	How dates appear on documents (e.g., DD/MM/YYYY or MM/DD/YYYY).
Company Logo	Uploaded image that appears on all generated documents for branding.
Owner Signature	Can be drawn manually in the app or uploaded as an image. Appears at the bottom of invoices.
Paid Stamp	Paid Stamp feature display a clear **PAID** mark on document to indicate that the payment has been completed.

Alternate Terms

App Term	Also Known As
Company / Business Setup	Company Profile, Business Profile, Organization Setup
Financial Year	Fiscal Year, Accounting Year, Tax Year
Owner Signature	Authorized Signature, Signatory

---

2. Clients & Suppliers

What It Is

All business contacts are managed in one place.

- Clients – businesses that receive invoices for sales.
- Suppliers – businesses from whom purchases are made.

Once a contact is added, it can be selected instantly while creating invoices or purchases, without entering details again.

When & Who Use it

This feature is useful for businesses that regularly deal with the same clients or suppliers.

- Contacts can be added in advance, or
- Created instantly while making an invoice or purchase.

□ Flow

1. Tap the **hamburger menu (☰)** (three lines, top-left) on the dashboard.
2. Select **Client / Supplier**.
3. To add a **client**,click on the **Add Client** and fill the details and save.
4. To add a **supplier**, switch to the Supplier tab and follow the same steps.

Key Fields

Field	What It Means
Opening Balance	Choose what applies: - To Receive: You will get money from the client - To Give: You will pay money to the client
GST Number (GSTIN)/ Tax ID	Enter your business tax identification number (e.g., GSTIN, VAT, or TIN)

Alternate Terms

App Term	Also Known As
Client	Customer, Buyer, Party, Consumer, Account
Supplier	Vendor, Seller, Creditor, Distributor, Wholesaler
Client/Supplier List	Party Master, Contact Book, Ledger, Account Directory
Opening Balance	Carried Forward Balance, Prior Balance, Outstanding Balance

Optional Sub-Features:

Transaction history- It shows the sales and payment that were recorded in a table format. User can select the transaction by tapping the rows that he wants to refer to and add changes if necessary

Export Client/Supplier List to Excel: -

You can easily download your Client/Supplier list using the Export Excel option.

Interaction with other features - dependency , side effects

Customer/Supplier Insight: -

Gives a complete summary of transactions, including credit limits, upcoming dues, overdue/long overdue amounts, pending items, payment behavior, and activity—all in one place.

Section	What It Shows	Why It's Useful
Pending Sale Orders	Orders that are created but not yet completed, grouped by pending days	Helps track unfinished orders and delays
Pending Estimates	Total value of quotations not yet converted into sales	Shows potential future business
Average Days to Pay	Average time a customer takes to make payments	Helps understand payment behavior and reliability
Customer Activity	Graph of monthly or periodic transactions	Helps track customer engagement and business trends
Top Selling Products	Most frequently purchased products by the customer	Helps identify customer preferences and popular items

Credit limit: Up to what limit would you allow the client to obtain credit from you against invoices. The customer insight records and shows for each client to remind you if the client has crossed the threshold limit that you have set for the client

Client/Supplier Category

This feature lets you group your clients and suppliers (e.g., Retail, e-Commerce, POS).

It is not visible by default:

- To use it, go to Settings → Client/Supplier Categorization Settings and enable it
- Once enabled, you will see the Category Option in the Client/Supplier form

Report – Top 5 customers on the basis

- **Receivables / Payables–** That shown a list of clients that owes you and a total receivable about

Batch Upload:

Easily upload multiple clients at once using the Batch Upload feature—simply select the Client option, download the template, fill in client details, and upload the file to add them in bulk.

□ Video Tutorial

---

3. Products & Services

What It Is

The Products & Services section helps you manage all the goods and services your business offers. You can save each item's key details—like name, description, price, and tax—and reuse them in invoices to make billing faster and more consistent.

Who should use this?

All businesses—whether selling physical goods (a shop), digital products (a SaaS), or services (a consultant or salon).

When do you use it?

Set up before creating your first invoice or add products directly while creating an invoice.

□ Flow — Adding a Single Product or Service

1. Go to Dashboard >> Menu (☰) >> Product >> Product List
2. Go to Product List >> Add New Product
3. Tap Add New Product
4. Fill required fields (Name, Price, Category, etc.)
5. Enable or disable inventory tracking as needed
6. Tap Save

Key Fields

Field	What It Means
Sale Rate	Price at which the item is sold to clients.
Purchase Rate	Price at which the item is purchased from suppliers; used for profit calculation.
Tax Rate	Applicable GST or VAT percentage. Automatically applied invoices.
Opening Stock	Initial stock quantity when the product is added.
Opening Stock Rate	
Minimum Alert Level	Stock threshold that triggers a low-stock warning for reordering.
HSN Code	A number that identifies a product.

Optional Features

Product Categorization:

- This feature lets you group your products into categories (e.g., Electronics, Services, Raw Materials).
- It is not visible by default. To use it, go to Settings → Product Categorization Setting and enable it.Once enabled, you can create categories using the “Add Category” button and assign them to products. You can also enable “Group Line Items by Product Category” to automatically group items by category invoices and other documents.

Alternate Terms

App Term	Also Known As
Product	Item, Good, Article, SKU, Stock Item, Commodity
Service	Work, Task, Job, Offering, Service Item
Sale Rate	Selling Price, MRP, Unit Price, List Price
Purchase Rate	Cost Price, Buy Rate, Landed Cost
HSN Code	Tariff Code, Commodity Code, Product Classification Code
Product Catalogue	Item Master, Price List, Inventory List, Product Database
Measurement Unit	Unit of Measure (UOM), Unit

Manage Product Rates:

Let's quickly set or update the selling price (Sale Rate) and purchase cost (Buy Rate) for your products.

How to use:

1. Go to Product → Manage Product Rates.
2. Find the product using the search box or scroll in the list.
3. Enter the selling price under Sale Rate and the cost price under Buy Rate.
4. Click Done to save or cancel discard changes.

Export Product List to Excel:

You can easily download your Product List using the Export Excel option.

Batch Upload (Products via Excel)

- Add multiple products at once using an Excel file.
- Go to Settings → Batch Upload → Create New Product. Download the template, fill in product details, and upload it. Confirm, review the preview, then tap Save Products.

Online store:

Products added to the Product List automatically appear in the Online Store

□ Video Tutorials

- How to Add Product or Service (https://www.youtube.com/watch?v=EmURS_9WiG4&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=4)
- Batch Upload Multiple Products (https://www.youtube.com/watch?v=-zSq_ioaw8A&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=5)
- Setup Product Categorization (https://www.youtube.com/watch?v=Lyt9zfVnRHM&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=23)

NOTE:

- At present, you cannot create the same product again with the same spelling even if you have deleted the first product. Because It is not possible to delete the product permanently, as we only soft delete the product because you may have invoices with that product.
- If you want to add the same product again, you have to make some changes in the spelling or add something like comma (,), dot (.),....etc.
- Also, it is not possible to delete/reset any specific section, either we can delete/reset your all data or nothing.

---

4. Invoices

What It Is

An invoice is a formal, legally binding document issued by a seller to a buyer, requesting payment for goods delivered or services rendered. It details what was sold, the quantities, prices, applicable taxes, and the total amount due. In India, a GST-registered business must issue a **tax invoice** for all taxable supplies.

When & Who

Used by any business that sells goods or services — freelancers, retailers, wholesalers, service providers. An invoice is raised after a sale is made or a service is delivered.

□ Flow

1. From the dashboard, **swipe right to left** to find the **Invoice** section.
2. Tap **Add New Invoice** Set the invoice date. Optionally add a due date.
3. Tap **Client Name** → select an existing client or create a new one inline.
4. Tap **Add Items** → select products/services or add new ones on the spot.
5. Apply discount, tax, and shipping charges if applicable.
6. In the **Payment** section, record any advance or instant payment received.
7. Optionally customize the invoice (header, footer, signature, image, notes, custom fields).
8. Tap **Preview** → then **Save**, **Send**, **Print**, or **Change Template**.

Key Fields

Field	What It Means
Due Date	The deadline by which the client must make payment.
Discount	A reduction applied to the price. Can be a flat amount (e.g., ₹200 off) or a percentage (e.g., 10% off). Applied per item or on the total.
Tax	GST, VAT, or other tax added to the invoice. Applies based on the tax rate set on each product.
Shipping Charges	Additional charges for delivery or freight. Added as a separate line item.
Custom Fields	User-defined labels and values that appear at the top of the invoice — e.g., PO Number, Vehicle Number, LR Number.

Invoice Status

Status	Meaning
Not Received	Payment has not been collected yet.
Partially Received	Some payment has been collected; a balance remains.
Fully Received / Paid	The complete invoice amount has been collected.

Optional Features

- **Recurring Invoice-** A recurring invoice is an invoice that is automatically created and sent at regular intervals.
- **POS Mode Enhancements:** While making a POS invoice, you can choose to mark a customer as:
  - **Walk-in Customer:** Avoid adding any customer details.
  - **Regular Customer:** Save all details such as Name, Address, Phone, GSTIN, etc.
  - Walk-in customers are shown in an aggregated manner in your customer reports.
  - This feature will help you keep your regular and one-off customer seperate.
  - It can be useful for your business if you use POS mode but sometimes need to invoice a few regular customers (e.g- wholesale customers or repeat loyal customers).
- **Sale Return-** A sale return happens when a customer returns goods they bought from a seller.
- **Reports-** Sale/Payment Report, sales by client, sales by product,sales by category,History of sales/payment, invoice aging, detailed sales report.

  NOTE: This feature will be reflected in invoices once the setting is enabled from the main settings.
- **B2B Invoice-** An e-invoice (electronic invoice) is a digitally created and government-validated invoice used mainly for GST reporting.

- **e-way Bills-** An e-way bill is a digital document required for transporting goods Commission is an amount of money paid to someone for making a sale or helping complete a deal.
- **Delivery Note-** A delivery note is a document sent along with goods when they are delivered to a customer.
- **Credit Note-** A credit note is a document issued by a seller to a buyer to reduce the amount the buyer owes.

Commission- Commission can be enabled and calculated on selling or discounted price, but it's excluded from invoices and treated as an expense.

Payment Account setting: Enable payment accounts to track where money is received or paid (cash/bank) and set a default account

UPI QR Code A scannable QR code linked to the business's UPI ID. The client can scan and pay instantly using any UPI-enabled app.

Banking Details The business's bank account information added so the client knows how to pay upon acceptance.

Add an Image to your Estimate- You can now add an image to your Estimate record and choose whether to show or hide it in the PDF, based on whether it's for client view or internal reference.

Alternate Terms

App Term	Also Known As
Invoice	Bill, Tax Invoice, Sales Invoice, Commercial Invoice, Tax Bill
Due Date	Payment Deadline, Payment Due Date
Discount	Rebate, Concession, Price Reduction
Advance Payment	Partial Payment, Token Amount, Deposit, Down Payment
Terms & Conditions	Payment Terms, T&C, Conditions of Sale
Shipping Charges	Freight, Delivery Charges, Logistics Cost

---

5. Estimates / Proforma Invoices

What It Is

An estimate is a non-binding price proposal sent to a potential client before work begins or an order is confirmed. It shows what the client will likely be charged, but it has no legal payment obligation and cannot be used for tax claims. It is used to get client approval on pricing before a final invoice is raised.

When & Who

Used by freelancers, contractors, agencies, service providers, and any business that quotes prices before delivery. Sent when a client asks "how much will this cost?" before confirming an order.

□ Flow

1. Go to the **Estimate** window from the dashboard.
2. Tap **Create Estimate**.
3. Set the date (top-right).
4. Add a new or existing client.
5. Add products/services, apply taxes and discounts.
6. Optionally customize (header, footer, notes, catalog image, payment options).
7. Tap **Preview** → then **Send** via email or other method.
8. Customize the email template if needed → click **Send**.

Key Fields

Field	What It Means
Estimate Date	The date the quote is prepared. Used to track the age and validity of the quote.
Banking Details	The business's bank account information added so the client knows how to pay upon acceptance.
Pay Now Button (PayPal)	An embedded direct payment link added to the estimate for online payment.

Concepts

Estimate vs. Invoice: An estimate is a *quote* — tentative, no legal obligation. An invoice is a *bill* — legally binding, payment is due. A client can reject an estimate; once an invoice is issued, payment is expected.

Add an Image to your Estimate- You can now add an image to your Estimate record and choose whether to show or hide it in the PDF, based on whether it's for client view or internal reference.

Alternate Terms

App Term	Also Known As
Estimate	Quote, Quotation, Price Quote, Proforma Invoice, Proposal, Price Offer
Banking Details	Bank Account Details, Payment Information, Beneficiary Details
UPI QR Code	Payment QR, Scan-to-Pay Code

□ Video Tutorial

How to Create an Estimate / Proforma Invoice (https://www.youtube.com/watch?v=J7f9U3ozE4M&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=6)

---

6. Sale Orders

What It Is

A sale order is created when a customer confirms they want to buy from you, but you haven't delivered the goods or raised the final invoice yet. It serves as an internal record that reserves stock and initiates the fulfillment process.

When & Who

Wholesalers, distributors, or any business where orders are placed in advance and fulfilled later. Common in B2B trade. When: When a customer sends you an order and you want to formally accept it, reserve inventory, and track delivery.

□ Flow for creating the Sale Order

1. From the dashboard, **swipe right to left** to find the **Sale Order** section.
2. Tap **Create Sale Order** → fill in client and item details → **Save**.
3. Status: **Pending** (order accepted, not yet delivered/invoiced).

□ Flow for creating the Sale Order to Invoice

1. When ready to deliver: tap the Sale order → **Make Invoice** → save.
2. Once payment is recieved, Sale order status updates to **Completed**.

Sale Order Status

Status	Meaning
Pending	Order accepted but goods not yet delivered or invoiced.
Completed	Invoice has been raised and payment received.
Manually Completed	You force-close the sale order manually, even if it's not fully fulfilled or completed.
Cancelled	The sale order is completely cancelled and will not be processed.

Concepts

Sale Order vs. Invoice: A sale order is a *commitment to sell* — it records the customer's confirmed intent to purchase. An invoice is the *formal bill* generated after delivery and requesting payment. A sale order does not affect inventory or accounts until it is converted to an invoice.

Reference Number on Invoice: When you create an invoice from a sale order, the invoice is automatically assigned the corresponding sale order reference number. This helps you easily track and search for invoices linked to a specific sale order from the invoice list. Using two sale orders with same customer we can create a single invoice record.

□ Video Tutorial

How to Create a Sale Order (https://www.youtube.com/watch?v=swWyOktSWvg&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=22)

---

7. Purchase Orders

What It Is

A Purchase Order (PO) is a document sent by the business to a supplier to formally request goods before they are received. It records what is being ordered, in what quantity, and at what agreed price. It serves as a binding commitment between the buyer and supplier before any physical exchange takes place.

When & Who

Used by retailers, wholesalers, and any business that procures stock from suppliers in advance. A PO is raised when the business wants to formalize an order before goods are dispatched by the supplier. Common in formal B2B procurement where documentation is required at every step.

□ Flow for creating the Purchase Order

1. From the dashboard, **swipe right to left** to find the **Purchase Order** section.
2. Tap **Create Purchase Order** → fill in client and item details → **Save**.
3. Status: **Pending** (order accepted, not yet delivered/invoiced).

□ Flow for creating the Purchase Order to Purchase Record

1. When ready to deliver: tap the Purchase order → **Make Purchase Record** → save.
2. Once payment is paid, Purchase order status updates to **Completed**.

Key Fields

Field	What It Means
Discount	Any price reduction agreed upon with the supplier for this order.

Purchase Order Status

Status	Meaning
Pending	Order has been created and sent but goods have not yet been received.
Completed	Goods have been received and a purchase record has been created against this PO.
Manually Completed	You force-close the PO manually, even if it's not fully fulfilled or completed.
Cancelled	The purchase order is completely cancelled and will not be processed.

Concepts

Purchase Order vs. Purchase Record: A PO is a *request* — it is created before goods arrive and does not affect inventory or accounts. A purchase record is the *accounting entry* made after goods are physically received. Many small businesses skip POs entirely and go straight to purchase records. Formal procurement workflows use both.

Why use a Purchase Order: A PO protects both parties. The supplier has a documented commitment to fulfill. The buyer has a record of what was agreed — price, quantity, items — which can be verified when goods arrive. Discrepancies between the PO and what is received are caught at the point of entry.

Reference Number on Purchase Record: When you create an purchase record from a purchase order, the purchase record is automatically assigned the corresponding purchase order reference number. This helps you easily track and search for purchase linked to a specific purchase order from the purchase list. Using two purchase orders with same supplier we can create a single purchase record.

□ Video Tutorial

- Purchase Order & Record (https://www.youtube.com/watch?v=lKUJ9sprbJU&list=PL9NRmuo_lj22dReggkiHIZRUK-b-4kWKz&index=21)

---

8. Purchase Records

What It Is

A Purchase Record is the accounting entry created when goods are actually received from a supplier. It formally records the inward movement of stock, updates inventory quantities, and tracks the payment owed to the supplier. It can be created either by converting a completed Purchase Order or directly as a standalone entry.

When & Who

Used by any business that buys physical goods from suppliers — shops, wholesalers, distributors. A purchase record is created at the moment goods arrive, regardless of whether a PO was raised beforehand.

□ Flow

1. From the dashboard, **swipe right to left** to find the **Purchase** section.
2. Tap **Add New Purchase Record** Set the purchase date. Optionally add a due date.

3. Tap Supplier Name → select an existing supplier or create a new one inline.
4. Tap Add Items → select products/services or add new ones on the spot.
5. Apply discount, tax, and shipping charges if applicable.
6. In the Payment section, record any advance or instant payment Paid.
7. Optionally customize the purchase record (header, footer, signature, image, notes, custom fields).
8. Tap Preview → then Save, Send, Print, or Change Template.

Purchase Record Status

Status	Meaning
Unpaid	Supplier has not yet been paid for this purchase.
Partially Paid	Some payment has been made; a remaining balance is outstanding.
Paid	Supplier has been fully paid.

Important Rule: Opening Stock

If a product's opening stock was already entered during product creation, **do not enter it again in a purchase record**. The app will count it twice, resulting in an inflated inventory figure. Opening stock is a one-time entry made only during the initial product setup.

Concepts

Purchase Record: A document that confirms goods ordered from a supplier have been physically received and inspected. A purchase record in SIM serves this function — it is the internal proof that stock came in.

Note- Reports - You can check purchase/ payment report, detailed purchase report, Purchase order report.

Alternate Terms

App Term	Also Known As
Purchase Record	Purchase Entry, Purchase Invoice, Goods Receipt, GRN, Inward Entry
Supplier	Vendor, Seller, Distributor, Creditor
Buy Rate	Cost Price, Purchase Price, Landed Cost
Unpaid	Outstanding, Due, Payable

□ Video Tutorials

- How to Create a Purchase Record (https://www.youtube.com/watch?v=282YfFsveQs&list=PL9NRmuo_lj22dReggkiHIZRUK-b-4kWKz&index=7)

---

9. Inventory Management

What It Is

Inventory management in SIM tracks the quantity of physical goods a business holds at any point in time. Stock levels update automatically — increasing when purchases are recorded and decreasing when sales (invoices) are made. The feature also supports manual adjustments and low-stock alerts.

When & Who

Relevant only for businesses dealing in physical goods — shops, wholesalers, distributors. Not applicable to pure service businesses. Should be enabled as part of initial app setup.

What Affects Inventory

Action	Effect on Inventory
Invoice (Sale)	□ Stock decreases
Purchase Record	□ Stock increases
Manual Adjustment	□ Increases or decreases
Estimate / Quotation	□ No effect
Sale Order	□ No effect
Purchase Order	□ No effect
Delivery Note	□ No effect

□ Flow — Enabling Inventory

1. Go to **Settings** → **Inventory Management** → toggle **on**.
2. Enable **Low Inventory Alert** if you want to receive notifications.

3. Select the **inventory valuation method** (see Concepts below).
4. When adding or editing a product, toggle **Enable Product Inventory** and set opening stock and minimum alert level.

□ Flow — Manual Inventory Adjustment

1. Tap the hamburger menu (☰).
2. Go to **Inventory** → **Add Inventory Manually**.
3. Select Stock In or Stock Out.
4. Enter quantity and reason.
5. Tap Save (updates instantly).

Flow — Automatic Inventory Adjustment

When a user creates a purchase record, the stock quantity for the respective products is automatically updated in the inventory.

□ Flow — Low Inventory Alerts

1. Tap the hamburger menu (☰)
2. Go to **Inventory** → Low **Inventory Level Alert**
3. Displays all products below their minimum alert level

Concept:

Negative inventory occurs when the system shows stock below zero This typically happens when a sale (invoice) or stock-out is recorded before the corresponding stock-in (purchase) is entered.

Key Fields

Field	What It Means
Enable Product Inventory	Turn this on to track stock for the item.
Opening Stock	Opening Stock is the quantity of the item/product that a company has available for sale or use at the beginning - Need to change.
Opening Stock Rate	The 'Opening Stock Rate' refers to the price per unit of an item at the time of purchasing it i.e. the cost price. (Buy rate) . For example, if you've initially bought 10 items for $1000, then the rate per unit would be $100.
Minimum Alert Level	The limit set for low stock. The app alerts you when stock goes below this number.
Stock-In	When stock increases (e.g., buying or adding items).
Stock-Out	When stock decreases (e.g., selling or removing items).
Inventory Valuation Method	The method used to calculate the cost of items when they are sold.

Manual Inventory Adjustment

Allows stock levels to be updated without creating a sale or purchase transaction. Used for:

- Items consumed internally or personally
- Damaged or expired goods
- Free samples given out
- Inventory corrections after physical stock count
- Lost or stolen goods
- Opening stock adjustments

Inventory Valuation Methods

1. Actual Average Buy Rate (Weighted Average Cost) — Recommended Calculates the average cost of all units purchased over time. When an item is sold, its cost is recorded at this average.

Example: 10 units bought at ₹100, then 10 more at ₹120. Weighted average = (10×100 + 10×120) / 20 = **₹110 per unit** Every unit sold is costed at ₹110 regardless of which batch it came from.

Best for: Most businesses. Smooths out price fluctuations over time.

---

2. FIFO (First In, First Out) Assumes the *oldest* stock purchased is always sold *first*.

Example: 10 units at ₹100 (Batch 1), then 10 units at ₹120 (Batch 2). When selling, cost is taken from Batch 1 first (₹100 each), then Batch 2 (₹120 each).

Best for: Perishable goods (food, medicine, cosmetics) where older stock must be sold before expiry.

Financial effect: In a rising-price environment, FIFO results in a lower cost of goods sold → higher reported profit compared to average cost.

---

3. Fixed Buy Rate Uses a single manually defined cost price regardless of actual purchase price fluctuations.

Example: Fixed rate set at ₹100. Even if you later buy at ₹130, cost is still recorded at ₹100.

Best for: Businesses with stable, predictable purchase prices who prefer simplified cost tracking.

Alternate Terms

App Term	Also Known As
Inventory	Stock, Goods, Merchandise, Stockroom, Store
Stock-In	Goods Received, Inward, Purchase Entry, Positive Adjustment
Stock-Out	Goods Issued, Outward, Sales Deduction, Negative Adjustment
Minimum Alert Level	Reorder Point, Safety Stock Level, Low Stock Threshold
FIFO	First In First Out, Queue Method
Weighted Average	Moving Average, Average Cost Method, WAC
Inventory Valuation	Stock Valuation, Cost Method
Physical Stock-Take	Reconciliation

Interaction with Other Features (Dependencies & Side Effects)

- **Reorder Management:** This feature allows you to generate purchase orders based on the minimum stock level set when enabling inventory for a product.
- **Batch Upload (Inventory Data):** You can add or update large amounts of product or client data at once using a CSV or Excel file via Batch upload feature. It saves time, reduces manual errors, and ensures consistent data across the system.
- **Cost of Goods Sold (COGS):** COGS is directly related to the inventory valuation method used.

Optional Sub-Feature

- **Physical Stock-Take:** At the end of the day, there may be differences between the inventory calculated by the app and the actual physical stock in your warehouse. This feature allows you to correct such differences by adding Reconciliation Edits to the product list along with their current stock.

Also add Reconciliation Edit in the Field References section of Inventory Management.

10. Sales Return, Refunds & Credit Notes

What It Is

Sales Return

A **Sales Return** happens when a customer gives back something they bought.

- **Don't delete the original invoice** – it shows the sale actually happened.
- **Create a Sales Return** instead. This:
  - Connects to the original invoice
  - Shows what was returned
  - Keeps your sale record correct
  - Puts the returned items back in stock

In simple terms:

Goods come back → create a Sales Return → stock is updated

Credit Note

A Credit Note is used to handle the money value of the returned goods.

- It records how much amount is owed back to the customer
- You can:
  - Refund the amount (cash/bank), or
  - Adjust it in the next invoice

Please Note: To use this feature, make sure Credit Note is enabled in your settings.

When & Who

Used by any business that accepts returns — retailers, wholesalers, e-commerce sellers. Also used to issue goodwill credits, discount coupons, or adjustments for quality complaints, without any physical return of goods.

□ Flow — Recording a Sale Return

1. Tap on the original invoice → select **Make Sale Return**.
2. Enter return quantities → tap **Next** → review preview → tap **Save**.
3. A separate sale return entry is created. The original invoice remains unchanged.
4. Status of sale return: **Not Refunded**.

□ Flow — Issuing a Refund

1. Tap on the sale return entry → tap **Mark as Refund** → enter amount → save.
2. Status updates to **Refunded**.

□ Flow — Adjust Refund During Payment

When recording a payment from a client, you can adjust the refund amount from a Sales Return.

- Go to Payment Received
- Select the client
- Choose the Sales Return (Credit Note)
- Adjust the refund amount to update the receivable for that invoice

□ Flow — Adjusting a Credit Note Against a Future Invoice

1. Enable **Credit Note** feature in settings.
2. Create a new invoice for the same client — a **Credit Note section** appears below the total.
3. Check the option to adjust or carry forward the credit.
4. Invoice shows **Partially Received** if only part was covered by credit. Collect the remaining balance and mark as paid.

□ Flow — Issuing a Credit Note Directly to a Client

1. Go to **Credit Note List** → tap **Create**.
2. Select client → enter amount → save. Status: **Not Adjusted**.
3. When the client makes a future purchase, create an invoice — available credit appears.
4. Apply the credit → save. Status updates to **Adjusted**.

□ Flow — Adjusting One Credit Note Against Multiple Invoices

1. Create or open a credit note → tap **Adjust Credit Note Against Invoice**.
2. Only invoices with unpaid or partially paid status will appear.
3. For each invoice: enter the adjustment amount.
4. Review the summary (total credit, amount adjusting, remaining balance).
5. Tap **Next** to confirm. Once fully applied, the credit note balance becomes zero.

Key Fields

Field	What It Means
Return Quantity	Number of units being returned. Cannot exceed the quantity in the original invoice.
Refund Amount	The monetary value returned to the client in cash or via bank transfer.
Credit Note Amount	The value of credit issued to the client for future use.
Credit Note Status	Whether the credit has been used against an invoice yet.
Sale Return Status	Whether the monetary value of returned goods has been refunded or not.
Adjustment Amount	The portion of a credit note being applied to a specific invoice.

Field	What It Means
Remaining Credit Balance	The unused portion of a credit note still available for future transactions.

Status

Document	Status	Meaning
Sale Return	Not Refunded	Return recorded; money not yet returned to client.
Sale Return	Refunded	Money has been returned to client.
Credit Note	Not Adjusted	Credit exists but has not yet been applied to an invoice.
Credit Note	Adjusted	Credit has been fully applied against invoice(s).

Credit Note Use Cases

A credit note can be issued in the following situations:

- Client returned goods (linked automatically to a sale return)
- Overcharged on a previous invoice
- Goodwill gesture or loyalty reward
- Quality complaint settlement
- Promotional discount applied after a sale

Credit Note: Refund vs. Adjustment

Method	What Happens
Refund	Money is physically returned to the client (cash, bank, UPI). The credit note is marked as refunded.
Adjustment	Refund is not made, instead the credit amount is reduced from the client's next invoice total. The credit note is marked as adjusted.
Partial Adjustment	Part of the credit is used on one invoice; the remaining balance carries forward.
Multi-Invoice Adjustment	A single credit note can be split and applied across multiple unpaid or partially paid invoices.

Concepts

Why not delete the original invoice: Deleting an invoice when goods are returned misrepresents financial history. The original sale happened and must remain in the books. A sale return is a *contra entry* — it offsets the original without erasing it. This is a fundamental principle of double-entry bookkeeping.

Credit Note: A formal document issued by a seller to a buyer, reducing the amount the buyer owes or crediting their account. It is the reverse of an invoice. Example: Invoice raised for ₹10,000 (10 items at ₹1,000 each). Client returns 2 items. Credit note issued for ₹2,000. The client now either receives ₹2,000 back or has ₹2,000 to offset a future purchase.

Credit Note Feature Toggle: When this feature is enabled in Settings, every sale return automatically generates a linked credit note. When disabled, sale returns are recorded without generating a credit note — only simple refunds are possible.

Which invoices appear in multi-invoice adjustment: Only invoices where payment is *not received* or *partially received* are shown. Fully paid invoices do not appear because there is nothing to adjust against.

Alternate Terms

App Term	Also Known As
Sale Return	Sales Return, Return Inward, Customer Return, Goods Return
Credit Note	CN, Credit Memo, Store Credit, Credit Voucher
Refund	Reimbursement, Cashback, Money Back
Adjust / Adjustment	Apply, Offset, Set Off, Redeem
Carry Forward	Roll Over, Defer, Pending Credit

□ Video Tutorials

- Adjust Sale Return with Credit Note (https://www.youtube.com/watch?v=GamzorLvw1s&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=16)
- Issue a Credit Note to Client (https://www.youtube.com/watch?v=tIphGNPEiVs&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=17)
- Adjust Credit Note Against Multiple Invoices (https://www.youtube.com/watch?v=mLJWo9v02Ro&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=18)

Interaction with other features - dependency , side effects

- **Invoice:** The sales return is always linked to the original invoice against which the return is made.
- **Credit Note:** A credit note is created for every sales return to record the amount to be refunded or adjusted.
- **Reports:** Sales returns are reflected in reports, helping you track returns and their impact on your business.

- **Client / Transaction History:** The client's transaction history shows the sales return and updates their current balance (reduces the amount they owe).
- **Inventory:** Stock is automatically updated when a sales return is created (items are added back to inventory).
- **Payment Received:** While recording payments, the sales return amount can be adjusted since it affects the total receivable from the client.

---

11. Sub Users & Approvals

What It Is

Sub users allow a business owner to give other people (staff, accountants, sales team) limited access to the app. Instead of sharing your owner credentials, you create separate logins for each team member with specific roles and permissions. The approval workflow ensures that all transactions made by staff require sign-off by the owner before becoming final.

Who should use this: Business owners with employees, accountants, or sales staff who need to use the app. Especially useful for businesses where financial control and oversight are important.

When & Who

- When your business grows beyond a single user.
- When staff create invoices but only you approve/finalize them.
- When different employees handle specific tasks (e.g., invoicing, payments) and require oversight to prevent errors.
- When managing multiple sales reps and restricting access to sensitive data (e.g., financial reports).

□ Flow — Creating Sub Users

1. Tap hamburger menu (☰) → Sub User Management → Manage Sub Users.
2. Tap + → enter the required sub user details → select a role (check permissions/you can create a custom role with you choice of permission)→ tap Submit.

Please Note:

- Sub user receives login credentials and can access the app with their assigned permissions.
- Create unique login credentials for sub-user, (share the details with only the respective person to ensure privacy)
- You can disable, edit, or delete a sub user at any time.

□ Flow — Transaction Approval Workflow

- Enable Transaction Requires Approval in Sub User Management.

SUB-USER STEPS-

1. Create an invoice or estimate → goes to Approval Pending.
2. Check status:
    - **Approval Pending Transactions** → for pending documents.
    - **Approval Rejected Transactions** → for rejected documents.
3. Update documents in Approval Pending Transactions:
    - Edit → Tap **Update** → document returns to **Approval Pending** for owner approval.

OWNER / MAIN USER STEPS-

1. hamburger menu (☰) → **Cloud Account** → Approval Pending Transactions.
2. If the invoice includes a new client/product, approve them first.
3. Approve the invoice → it moves to the main transaction list and becomes live.

□ Flow — Selecting Role for the Sub user you are creating

1. Use the predefined roles: Partner/Manager, Sales and Billing, Purchase manager, Payment collector, Accountant
2. Go to manage Sub- user settings, tap on Add Sub-User
3. Under Role tap on the dropdown 'Please select a role before proceeding
4. Select from the list of roles available

□ Flow — Creating a custom category of sub-user: By Add Custom Role

1. Go to manage Sub- user settings, tap on Add Sub-User
2. Under Role tap on the dropdown 'Please select a role before proceeding
3. Tap '+Add Custom Role'
4. Write the Name of the type of role- To create a category
5. Check or un-check the list of documents or permission that this role can access

6. Tap on ‘Save Role’

 Flow — Specify the type of access /permission granted to the Sub-user Role

- Go to manage Sub- user settings, tap on Add Sub-User
- You can edit a custom role you have created OR You can create a fresh custom role

---

 Flow —For Rejected Transactions

1. Tap hamburger menu (☰)
2. Go to cloud account → Tap on ‘Approval Rejected Transaction’
3. Sub user can edit tap on edit icon and → Tap on update (The document moves back to Approval Pending)
4. Or delete the record

⚙ Optional Sub-Features:

- Predefined Roles: Choose from built-in roles (e.g., salesperson, accountant) that come with preset permissions.
- Custom Role: Define your own role with exactly the permissions you want — granular control over what each sub user can see and do.
- Disable Sub User: Temporarily remove access without deleting the account (e.g., for a seasonal employee).
- Approval for New Parties/Products: When a sub user creates a new client or product that doesn’t exist in the database, the owner must approve the new record before approving any related transaction.

Key Fields & Settings

Field	What It Means
Sub User Name	The display name of the team member.
Role	The assigned position that determines the sub user's permission set.
Permissions	Individual access controls — e.g., can create invoices, cannot delete, cannot view reports. - Allow Individual access controls (Access Invoice document but not Payment) - You also specify the type – View, edit, delete
Transaction Requires Approval	When enabled, all transactions created by sub users enter a pending queue and are not live until the owner approves them.
Approval Status	Pending = awaiting owner review. Approved = live in the system. Rejected = not accepted.

Sub User Limits

- Maximum **5 sub users** can be added to an account.
- Only **3 sub users** can be active at the same time.
- Sub users can be disabled, re-enabled, edited, or deleted at any time.

Roles

- **Predefined Roles:** Built-in roles with preset permissions (e.g., salesperson, accountant).
- **Custom Role:** The owner can define a role with exactly the permissions required — granular control over each feature.

Concepts

Role-Based Access Control (RBAC): A security model where each user is assigned a role, and each role carries a defined set of permissions. This ensures team members only access what is relevant to their function — a salesperson can create invoices but cannot view profit reports or delete records.

Why approve new clients/products first: When a sub user creates a new client or product during a transaction, those records exist only in a pending state — they are not yet official entries in the database. The owner validates them before they become permanent records. This prevents duplicate entries, typographical errors, or unauthorized additions to the system.

Alternate Terms

App Term	Also Known As
Sub User	Staff Account, Employee Login, Team Member, Secondary User
Role	User Role, Access Level, Permission Level, Profile
Transaction Requires Approval	Maker-Checker, Dual Control, Approval Workflow, Authorization Workflow
Approval Pending	Awaiting Review, Under Approval, Pending Authorization

Interaction with Other Features — Dependencies & Side Effects

- When Transaction Approval is enabled for a sub user, all their transactions require owner approval.

- Proper device syncing is required to reflect updates across users.
- Clients/products created by a sub user must be approved; otherwise, they cannot be used by the main user.
- Payment approval depends on the approval of the related invoice.
- Sub users cannot access features not enabled by the main user (e.g., Inventory, Commission, Delivery Note, Cash/Bank Transfer, Other Income).
- If restricted, sub users cannot edit rates in invoices, estimates, sales orders, or purchases.
- The main user can reset/change a sub user's password to revoke access.

Logical Behaviors (Different Scenarios)

- Maximum 3 active sub users allowed.
- Feature available only for paid users.
- Sub users have limited access to settings.
- If a client is rejected, related documents (Invoice, delivery note,etc.)are permanently deleted from approval list. Sub-user will have to recreate the document.
- Sub user can edit documents in Approval Pending, but cannot modify them after approval.

12. GST Compliance — India

What It Is

SIM integrates directly with India's government GST infrastructure, enabling businesses to generate GST-compliant documents — E-Invoices and E-Way Bills — without logging into government portals separately. All GST compliance features are specific to Indian GST regulations and apply only to GST-registered businesses in India.

Who It Applies To

- **E-Invoice (IRN):** Mandatory for GST-registered businesses with annual turnover exceeding ₹5 crore, for all B2B transactions.
- **E-Way Bill:** Required when transporting goods valued above ₹50,000 anywhere in India (inter-state; intra-state rules vary by state).

Core GST Concepts

GSTIN (GST Identification Number): A 15-digit unique identifier assigned to every GST-registered business in India. It encodes the state code, the business's PAN number, and an entity type indicator. It is mandatory on all tax invoices.

GSP (GST Suvidha Provider): A government-authorized intermediary company that provides a secure API channel between third-party apps (like SIM) and the GST portal. A GSP allows SIM to submit and receive data from the GST system on behalf of the business. The GSP used by SIM is: **BVMIT Consulting Services India Private Limited**.

GSP Credentials (Username & Password): Separate from the regular GST portal login. Created specifically for API-based integration. Must be generated on the respective government portal (e-invoice or e-way bill) and then entered once in SIM. These credentials authorize SIM to act on behalf of the business on the GST portal.

API (Application Programming Interface): The technical communication layer between SIM and the government GST portal. The GSP username and password authenticate this connection.

IRP (Invoice Registration Portal): The government portal where B2B invoices are submitted and registered to receive an IRN.

IRN (Invoice Reference Number): A unique 64-character hash generated by the IRP for each registered B2B invoice. Once generated, the IRN is printed on the invoice along with a QR barcode and an acknowledgement number. An IRN confirms that the invoice has been officially registered with the GST system.

E-Invoice: A B2B invoice that has been registered with the IRP and assigned an IRN. The invoice itself is created in SIM; the IRN is obtained from the government portal via the GSP integration.

E-Way Bill (EWB): A digitally generated document required before transporting goods worth more than ₹50,000. It is submitted to the government e-way bill portal and contains details about the goods, origin, destination, and transporter. It must accompany the goods during transit.

Input Tax Credit (ITC): A mechanism that allows GST-registered businesses to reduce their GST liability by the GST they have already paid on their purchases. For a buyer to claim ITC, the seller must have issued a valid tax invoice with a proper IRN (for applicable cases).

A. GSP Setup for E-Invoice

What It Is

A one-time setup that creates GSP credentials on the government e-invoice portal and links them to SIM. Without this, SIM cannot communicate with the government system to generate IRNs.

Flow- A. GSP Setup for E-Invoice

1. Go to the **e-invoice portal** → log in.
    - If already an e-Way Bill user: use the same credentials.
    - If new: click **New Registration** and complete registration.
2. After login: **Left Menu** → **API Registration** → **User Credentials**.
3. Verify the OTP sent to your registered mobile number.
4. Select **Through GSP** radio button.
5. From the GSP dropdown, choose: **BVMIT Consulting Services India Private Limited**.
6. Create your GSP Username and Password → click **Submit**.
7. Add these credentials in SIM under **Settings** → **E-Invoice Settings**.

Key Fields

Field	Explanation
GSTIN	Your 15-digit GST Identification Number. Used to validate your business on the portal.
GSP	The authorized provider used by SIM: **BVM IT Consultancy Services India Private Limited**
GSP Username	Created on the e-invoice portal. Always prefixed with `API_` (e.g., `API_yourusername`).
GSP Password	The password linked to your GSP username. Keep it secure. Update it in the app if changed on the portal.
Validate Seller GSTIN	Verifies your GSTIN against the government database and auto-fills your legal business name and address.

> ***Important:*** *GSP credentials are completely separate from your regular GST portal login. They are used only for app-to-portal integration.*

Video Tutorial

GSP Username & Password for E-Invoice (https://www.youtube.com/watch?v=dPSmtTALqQE&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=19)

B. Generating an E-Invoice (IRN)

What It Is

An e-invoice is a B2B invoice that has been officially registered with the government's IRP and assigned a unique IRN. It is legally required for businesses with annual turnover above ₹5 crore. Once generated, the invoice is locked — it cannot be edited or deleted, ensuring authenticity and tamper-proof records.

Flow- B. Generating an E-Invoice (IRN)

1. **Enable E-Invoice:** Settings → E-Invoice Settings → toggle on.
2. **Validate GSTIN:** Enter GSTIN, GSP Username & Password → Validate Seller GSTIN.
3. **Create Invoice:** Select client → Invoice Type: B2B → Add products with HSN, unit, quantity, tax → Save (status: Ready for E-Invoice).
4. **Generate IRN:** B2B Invoice List → Action → Generate IRN → Status: Confirmed (preview shows IRN, barcode, acknowledgement number).
5. **Finalize:** Print, save, or download from the app.

To cancel an E-Invoice:

1. Must be done within **24 hours** of generation.
2. B2B Invoice List → Action → three dots → **Cancel IRN**.
3. Choose reason → add remarks → tap **OK**.
4. Status updates to **Cancelled**.

Key Fields — E-Invoice

Field	What It Means
GSTIN (Seller)	The business's own GST number. Validated against government records before use.
GSP Username	Created on the e-invoice portal. Always prefixed with `API_` (e.g., `API_yourusername`).
GSP Password	The password for the GSP username. Must be updated in the app if changed on the portal.
Invoice Type	Must be set to **B2B** to be eligible for e-invoicing. B2B = transaction between two GST-registered businesses.
HSN Code	Mandatory for e-invoice. Classifies the goods or service for GST purposes.
IRN	The 64-character unique code generated by the IRP. Printed on the e-invoice.
Acknowledgement Number	A sequential confirmation number issued alongside the IRN.
QR Barcode	Machine-readable code printed on the e-invoice, encoding key invoice data for verification.
Unique Quantity Code (UQC)	A fixed, mandatory format for measurement units in e-invoice creation in India. The Invoice Registration Portal (IRP) requires units to be reported using a standardized Unique Quantity Code (UQC).

E-Invoice Rules

- Once an IRN is generated, the invoice **cannot be edited or deleted**.
- Cancellation is only possible within **24 hours** of IRN generation.
- After 24 hours, the IRN is permanent and cannot be reversed.

Invoice Status — E-Invoice

Status	Meaning
Ready for E-Invoice	Invoice saved and eligible; IRN not yet generated.
IRN Generated	E-invoice successfully registered with the government.
Cancelled	IRN cancelled within the 24-hour window.

□ Video Tutorial

How to Generate E-Invoice (IRN) (https://www.youtube.com/watch?v=nobz4DVwbzc&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=20)

C. GSP Setup for E-Way Bill

What It Is

Similar to e-invoice setup, generating e-way bills from SIM requires GSP credentials created on the government e-way bill portal. The setup process is identical, but it is done on a separate government portal.

> *If you are already an e-invoice user, you can use those same portal login credentials to log in to the e-way bill portal as well. However, GSP credentials (API username/password) need to be created separately on each portal.*

□ Flow

1. Go to **evwaybill.gst.gov.in** → log in.
    - Existing e-invoice users: same credentials work here too.
    - New users: click **New Registration.**
2. **Left Menu → Registration → For GSP.**
3. Verify the OTP.
4. Select GSP: **BVMIT Consulting Services India Private Limited.**
5. Create GSP Username and Password → save.
6. Add credentials in SIM under **Settings** → E-Way Bill.

□ Video Tutorial

GSP Username & Password for E-Way Bill (https://www.youtube.com/watch?v=dPSmtTALqQE&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=19)

D. Generating an E-Way Bill

What It Is

An e-way bill is a mandatory digital document required before transporting goods worth more than ₹50,000 within India. It must be generated before goods leave the business premises. Without a valid e-way bill, goods can be held at checkpoints and the business may face penalties.

□ Flow

1. **Enable E-Way Bill:** Settings → E-Way Bill → Enable the setting.
2. **Validate Seller:** Enter GSTIN, GSP Username & Password → Validate Seller GSTIN.
3. **Validate Buyer:** Client List → Select client → Add Legal Name & GSTIN → Validate Buyer GSTIN.
4. **Create Invoice:** Add products with HSN & unit → Apply GST.
5. **Generate E-Way Bill:** From invoice or Hamburger Menu → Invoices → E-Way Bill → Select invoice → Fill details → Generate.
6. If **Validation Fails:** Correct mandatory fields and retry.
7. **View E-Way Bill:** Appears in E-Way Bill section.

□ 1. Flow:Create E-Way Bill

You can generate an e-way bill in two ways:

- From E-Way Bill Section: Go to E-Way Bill → select an invoice → generate e-way bill
- From Invoice Form: Fill invoice details → tap “Generate E-Way Bill” → e-way bill form opens and invoice is auto-saved

2. Flow Validate Client GSTIN

You can validate GSTIN in two ways:

- From Client Section: Go to Clients → select customer → tap “Validate GSTIN” → enter details → validate → ✔ success shown
- From Invoice Form: Select client → tap edit icon → enter details → validate GSTIN

Key Fields

Field	Explanation
Seller GSTIN	Your GST number. Validated against government records.
Buyer GSTIN	The client's GST number. Both seller and buyer must be GST-validated before an e-way bill can be generated.
Legal Name	The official registered business name of the seller or buyer, as per GST records. Auto-fetched after GSTIN validation.
HSN Code	Mandatory. Classifies the goods being transported.
Measurement Unit (UQC)	Mandatory. The standardized unit in which goods are measured (e.g., KGS, NOS, LTR).
Transporter Details	Information about the vehicle or courier carrying the goods. Required to complete the e-way bill.
E-Way Bill Number	The unique number generated upon successful submission. Must physically accompany the goods during transport.

GSTIN Validation — Two Ways

A buyer's GSTIN can be validated from two places:

- **From the Client section:** Go to Clients → select the client → tap **Validate GSTIN** → enter details → validate.
- **From the Invoice form:** Select the client → tap the edit icon → enter GSTIN details → validate.

Key Rules for E-Way Bill

Rule	Detail
Value threshold	Required for goods worth more than ₹50,000 being transported.
Timing	Must be generated before goods leave your premises.
Validity	1 day per 200 km (or part thereof) for normal cargo vehicles. 1 day per 20 km for over-dimensional cargo.
Validation errors	If mandatory fields are missing, the system shows a specific error. Fix the flagged fields and retry — no penalty for failed attempts.

Video Tutorial

How to Generate E-Way Bill (https://www.youtube.com/watch?v=nobz4DVwbzc&list=PL9NRmuo_Ij22dReggkiHIZRUK-b-4kWKz&index=20)

GSP Credentials: E-Invoice vs. E-Way Bill — Quick Comparison

	E-Invoice Portal	E-Way Bill Portal
Website	einvoice1.gst.gov.in	ewaybill.gst.gov.in
Can share portal login?	If already an e-way bill user, same portal login works here	If already an e-invoice user, same portal login works here
GSP credentials	Must be created separately on this portal	Must be created separately on this portal

> ***Key distinction:*** *Your portal login (GSTIN + password) and your GSP credentials (API username + password) are two entirely different things. The portal login is for manually accessing the government website. The GSP credentials are exclusively for app integration.*

Alternate Terms

App Term	Also Known As
E-Invoice	Electronic Invoice, IRN Invoice, Tax Invoice with IRN
E-Way Bill	EWB, Electronic Way Bill, Goods Movement Document
GSTIN	GST Number, GST ID, Tax ID, GST Registration Number
GSP	GST Suvidha Provider, API Provider, GST Intermediary
IRP	Invoice Registration Portal, Government E-Invoice Portal
IRN	Invoice Reference Number, E-Invoice Number

App Term	Also Known As
HSN Code	Harmonised System Nomenclature, Tariff Code, Product Classification Code
UQC	Unique Quantity Code, Measurement Unit Code
ITC	Input Tax Credit, GST Credit, Tax Set-Off
Acknowledgement Number	ACK Number, Confirmation Number

Switch User you can now manage multiple businesses from the same device using switch user feature. You can also purchase additional organization accounts from within the app

This knowledge base will be updated as more documentation becomes available.
